

Wendy Shen

📍 Markham, ON ✉ wendys05@my.yorku.ca ☎ 647 675 5568 in wendy-shen-720117312 🌐 WendyShen-2005

Education

York University

Sept 2023 – May 2027

Bachelor of Arts in Computer Security (Spec. Hons.)

Coursework: Intro to Statistics, Intro to Probability, Software Tools, Advanced OOP, Computer Organization

Extracurriculars: Lassonde Engineering Society (IT Director), Ctrl-Hack-Del (hacker), ElleHacks (hacker)

Experience

Application Support Intern

Toronto, ON

Citco

June 2025 – Dec 2025

- Developed and implemented automated diagnostic workflow using AWS Bedrock Agents, Python, and Vite, incorporating access-controlled AWS Lambda functions to ensure secure inter-service communication.
- Designed logic to verify data lock states and prevent unauthorized modifications, improving data integrity and reducing the risk of accidental or malicious updates.
- Resolved 5+ SQL and UNIX-based support tickets daily, often related to user permissions.

Frontend Web Developer, Mobile App Developer

Remote

MusicalMoon

Feb 2024 – present

- Built responsive and secure web and mobile interfaces using Next.js and React Native, implementing robust input validation and safe API calls to enhance client-side security.
- Developed and maintained user profile and settings pages that handled private user information, ensuring privacy-conscious UI design and secure data handling.
- Collaborated through Git-based workflows to manage code integrity, reduce merge conflicts, and ensure consistent implementation of secure coding practices across a distributed startup team.

Mobile App Developer Intern

Remote

Wennovate Consulting

Feb 2025 – March 2025

- Developed key app features including authentication, order tracking, and data storage, enforcing role-based access controls and Firestore security rules to protect user data.
- Configured secure API access by protecting Google Maps keys with environment variables, mitigating risks of credential exposure.
- Conducted backend validation and integrity testing to ensure data consistency and protect against unauthorized writes, improving application reliability.

Projects

Evergreen Shooter | Python, Socket.io

[\[Repository Link\]](#) 

- Developed a LAN-based real-time multiplayer game, with a socket.io backend managing object movement.
- Implemented zoom functionality and real-time sync.

Haunted Builders | Java

[\[Repository Link\]](#) 

- Designed a 2D strategy simulation game using OOP principles and custom data structures
- Built dynamic game logic for economic simulation and interactive NPC behavior

Technologies

Languages: Java, Python, JavaScript, HTML, CSS, C, UNIX/Shell, Dart, Verilog, SQL

Technologies: Git/GitHub, Node.js, Next.js, React.js, React Native, Flutter, TypeScript, Firebase, Sockets.io, Selenium, MS Office, MS Excel, Jira, Confluence
